

PHISHING EMAIL DETECTION & AWARENESS SYSTEM

TASK 2

PREPARED BY:

MANOJ NARUGUNDA

FUTURE INTERNS

CYBER SECURITY INTERNSHIP

INTRODUCTION

Phishing is a cyber attack in which attackers use fraudulent emails, messages, or websites to trick users into revealing sensitive information such as passwords, banking details, or personal information.

These emails often appear to come from trusted organizations and use urgency or fear to persuade users to take immediate action.

Objective:

- Analyze different email types.
- Identify phishing indicators.
- Classify emails as Safe, Suspicious, or Phishing.
- Create awareness about phishing attacks and prevention methods.

Tools Used:

- Gmail
- Microsoft Word
- Canva
- GitHub

EMAIL ANALYSIS & FINDINGS

Email 1 – Safe Email

Sender: reminder@email.airtelpaymentsbank.co.in

Classification: Safe

Reason:

- Official-looking sender domain
- Professional formatting
- Personalized greeting
- No request for passwords or OTPs
- Legitimate banking communication

Email 2 – Suspicious Email

Sender: updates@simplilearnmailer.com

Classification: Suspicious

Reason:

- Marked as spam by Gmail
- Urgent subject line
- Password update request
- Sender appears legitimate but requires verification

Sender Name: Simplilearn Updates

Sender Email: updates@simplilearnmailer.com

Subject: Action Required: Please Update Your
Account Password

Classification: Suspicious ⚠

EMAIL ANALYSIS & FINDINGS

Email 3 – Phishing Email

Sender: support@hdfc-security-update.com

Classification: Phishing

Reason:

- Fake sender domain
- Urgent language
- Suspicious link
- Attempts to create fear and pressure

Sender: support@hdfc-security-update.com

Subject: Your Account Will Be Suspended

Classification: Phishing

Analysis

This email is a phishing attempt designed to trick users into revealing sensitive information. The sender's domain is not the official HDFC Bank domain and appears to imitate a trusted organization. The email creates urgency by warning that the account will be suspended if immediate action is not taken.

Comparison Table

Email	Classification
Airtel Payments Bank Statement	Safe
Simplilearn Password Update	Suspicious
Fake HDFC Account Suspension	Phishing

Risk Classification

Safe Email → Low Risk

Suspicious Email → Medium Risk

Phishing Email → High Risk

Awareness and Prevention Tips

1. Verify the sender's email address.
2. Do not click suspicious links.
3. Never share passwords or OTPs through email.
4. Check for spelling and grammar mistakes.
5. Enable Multi-Factor Authentication (MFA).
6. Report suspicious emails to the organization.

Conclusion

This project analyzed different email types and identified indicators that help distinguish between safe, suspicious, and phishing emails. Understanding these indicators can help users avoid phishing attacks and improve overall cybersecurity awareness.
